

Barracuda Web Application Firewall

Powerful application-layer security for Web sites and Web servers

The Barracuda Web Application Firewall protects Web sites and Web applications from attackers leveraging protocol or application vulnerabilities to instigate data theft, denial of service, or defacement of an organization's Web site. Unlike traditional network firewalls or intrusion detection systems that simply pass HTTP, HTTPS, or FTP traffic for Web applications, the Barracuda Web Application Firewall proxies this traffic and inspects it for attacks to insulate Web servers from direct access by hackers.

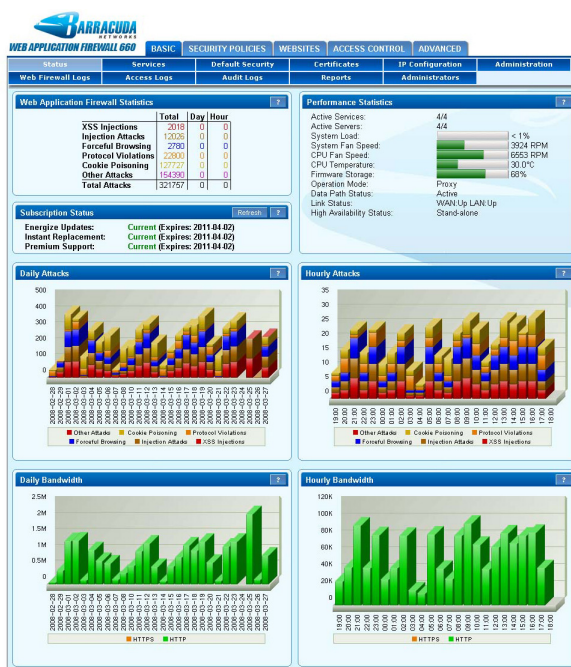

Comprehensive Web Site Protection

The Barracuda Web Application Firewall provides award-winning protection from all common attacks on Web applications, including SQL injections, cross-site scripting attacks, session tampering, and buffer overflows. As a full proxy, the Barracuda Web Application Firewall blocks or cloaks attacks, while preventing sensitive outbound data leakage, such as credit card or Social Security numbers.

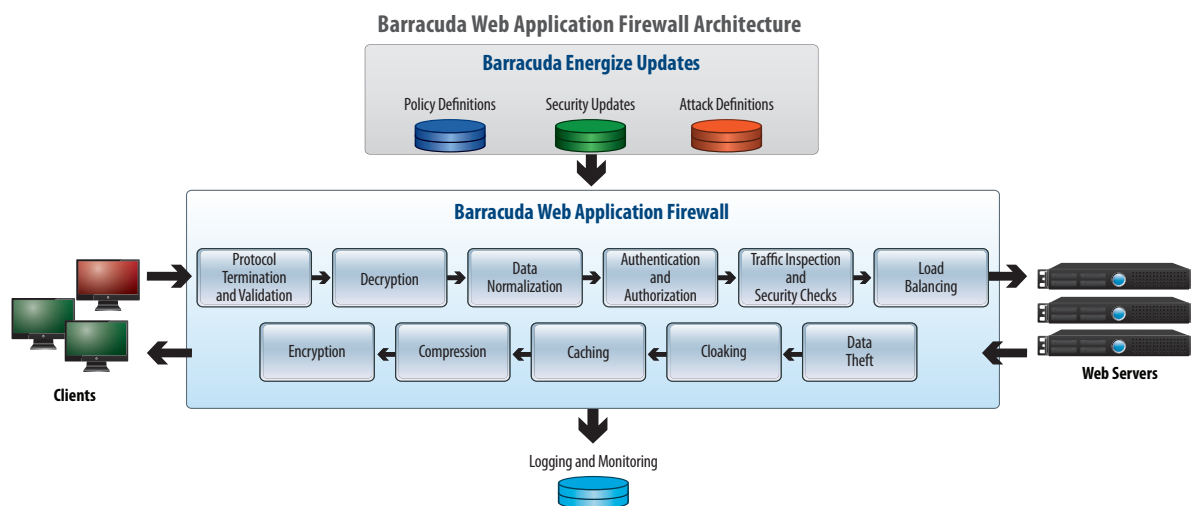

In addition, the Barracuda Web Application Firewall mitigates broken access control to applications by preventing cookie tampering and corruption of an application's access control system. Unlike intrusion detection systems that only analyze byte patterns, the Barracuda Web Application Firewall terminates HTTP traffic on behalf of the Web server to decode character sets, remove padded spacing, and normalize against common obfuscation techniques. For added security, the Barracuda Web Application Firewall provides full PKI integration for use with client certificates to verify identities of clients accessing the Web applications.

Advanced Traffic Management and Acceleration

To minimize ongoing administration associated with protecting Web sites against application vulnerabilities, the Barracuda Web Application Firewall automatically receives Energize Updates with the latest policy, security, and attack definitions. In addition to the comprehensive security benefits, there are also application delivery capabilities, such as SSL offloading, SSL acceleration, and load balancing. These capabilities are designed to improve the performance, scalability, and manageability of today's most demanding data center infrastructures.

The Barracuda Web Application Firewall monitors and tracks common application attacks, performance statistics, and bandwidth usage.

TECHNICAL SPECIFICATIONS

Key Features

WEB APPLICATION SECURITY

- HTTP/HTTPS/FTP protocol validation
- Protection against common attacks
 - SQL injection
 - OS command injection
 - Cross-site scripting
 - Cookie or forms tampering
- Form field meta data validation
- Adaptive security
- Web site cloaking
- Response control
 - Block client
 - Reset connection
 - Redirect
 - Custom response
- Outbound data theft protection
 - Credit card numbers
 - Social Security numbers
 - Custom pattern matching (regex)
- Granular policies to HTML elements

WEB APPLICATION SECURITY (cont.)

- AV for file uploads
- Protocol limit checks
- File upload control
- Brute force protection
- Session tracking
- Rate control

AUTHENTICATION AND AUTHORIZATION

- LDAP/RADIUS/local user database
- Client certificates
- Single Sign-On

LOGGING, MONITORING AND REPORTING

- System log
- Web Firewall log
- Access log
- Audit log
- PCI reports
- Syslog/FTP support

APPLICATION DELIVERY AND ACCELERATION

- High availability
- SSL offloading
- Load balancing
- Hardware SSL acceleration
- Caching
- Compression
- Content routing

XML FIREWALL

- XML DOS protection
- Schema / WSDL enforcement
- WS-I conformance checks

System Features

- Graphical user interface
- Role-based administration
- Secure remote administration
- Ethernet bypass ("fail open")
- Shared policies
- Trusted host exemption

Hardware Features

CONNECTORS

- Ethernet
 - LAN port
 - WAN port
 - Management port
- Serial port (DB-9) for console

POWER REQUIREMENTS

- AC Input Voltage - 110-240 V AC
- Frequency - 50 / 60 Hz

Support Options

ENERGIZE UPDATES SUBSCRIPTION

- Standard technical support
- Policy definitions
- Security updates
- Attack definitions

INSTANT REPLACEMENT SERVICE

- Replacement unit shipped next business day
- 24x7 Technical Support
